Tratamiento por laparotomía de la litiasis de la vía biliar principal

J.-P. Lechaux, D. Lechaux

Desde la aparición de la colecistectomía por vía laparoscópica, los progresos de la tecnología y la experiencia quirúrgica han permitido el tratamiento de la litiasis de la vía biliar principal por dicha vía. Sin embargo, sigue habiendo numerosas indicaciones del tratamiento mediante laparotomía, en especial si es imposible realizar la laparoscopia debido al paciente y/o al contexto quirúrgico, o cuando los fracasos obligan a una conversión. Las características de la litiasis y de la anatomía del árbol biliar, que se demuestran mediante colangiografía, permiten escoger entre dos vías de extracción litíásica: transcística o coledocotomía. La coledocoscopia ha contribuido en gran medida a mejorar el rendimiento de la exploración y la desobstrucción. El cierre de la coledocotomía sin drenaje es la solución ideal, pero el drenaje biliar externo mediante un drenaje de Kehr o transcístico está justificado en caso de maniobras de desobstrucción incompletas, repetidas o traumáticas. Ante un cálculo enclavado en la ampolla de Vater, inextirpable por coledocotomía y en ausencia de litotricia, la esfinterotomía endoscópica postoperatoria es preferible a la vía quirúrgica transduodenopapilar, que está expuesta a complicaciones graves más frecuentes. El tratamiento de la litiasis intrahepática, en especial en las formas primarias difusas de Extremo Oriente, está dominado por el riesgo de desobstrucción incompleta, lo que justifica que se recurra con frecuencia a la hepaticoyyunostomía con asa en Y, que permite la migración espontánea o la exéresis de litiasis residuales mediante maniobras externas.

Palabras Clave: Litiasis del conducto colédoco; Laparotomía; Coledocotomía; Drenaje biliar

<i>Plan</i>	
■ Introducción	1
■ Indicaciones	1
■ Preparación y anestesia	2
■ Preparativos quirúrgicos y vía de acceso	2
■ Colangiografía intraoperatoria	2
■ Tratamiento	3
Extracción por vía transcística	3
Extracción por coledocotomía	3
Extracción por vía transduodenopapilar	6
Técnica de la esfinterotomía biliar	6
■ Tratamiento de la litiasis intrahepática	7

■ Introducción

La cirugía por vía laparoscópica se inició con la colecistectomía. Una vez que los progresos técnicos lo permitieron, la exploración instrumental de la vía biliar principal (VBP) por vía transcística se hizo posible y fue seguida pronto por el acceso directo al colédoco. Aunque

Técnicas quirúrgicas - Aparato digestivo

no existen estudios comparativos sobre la laparoscopia y la laparotomía en el tratamiento de la litiasis de la VBP, puede presagarse que, gracias a las mejoras técnicas y de la experiencia quirúrgica, la vía laparoscópica se convertirá, al igual que en la colecistectomía, en el tratamiento de elección de la litiasis del colédoco, con sus beneficios en términos de duración del ingreso hospitalario, de comodidad y estéticos ^[1, 2]. Sin embargo, la cirugía por laparotomía, cuya excelencia se logró en algunos países como Francia ya en 1960 ^[3, 4], conservará un papel destacado debido a las contraindicaciones, imposibilidades o fracasos de la laparoscopia. Además, los avances laparoscópicos han influido profundamente en la técnica de laparotomía, y han dejado obsoletos algunos dogmas antiguos considerados como intocables, tales como el drenaje biliar externo casi sistemático tras la abertura del colédoco ^[5].

■ Indicaciones

Los cirujanos, enfrentados a la revolución tecnológica, deben aprender -a dominar todas las facetas técnicas del tratamiento quirúrgico de la litiasis de la VBP y ser capaces de participar en un debate multidisciplinar que
